

# DCI Therapy Summary

## Recommended

- First aid O<sub>2</sub>
- Hydration (not AGE)
- Prevent hyperthermia
- Prevent hyperglycemia
- Low molecular weight heparin for leg immobility
- Avoid hyperventilation for AGE
  
- Initial compression to 2.8 ATA
- Repetitive compressions 1-2/day until clinically stable

## Possibly beneficial

- Lidocaine
- NSAIDs

## No proven value

- Corticosteroids
- Full anticoagulation

## Future

- Perfluorocarbons
- Neuroprotective agents?
- Immune Response Modulators
